

Digitalize all your machines – regardless of age

Easily connect heterogeneous machine parks with the solution FORCAM FORCE EDGE and quickly scale globally with a new Machine Repository

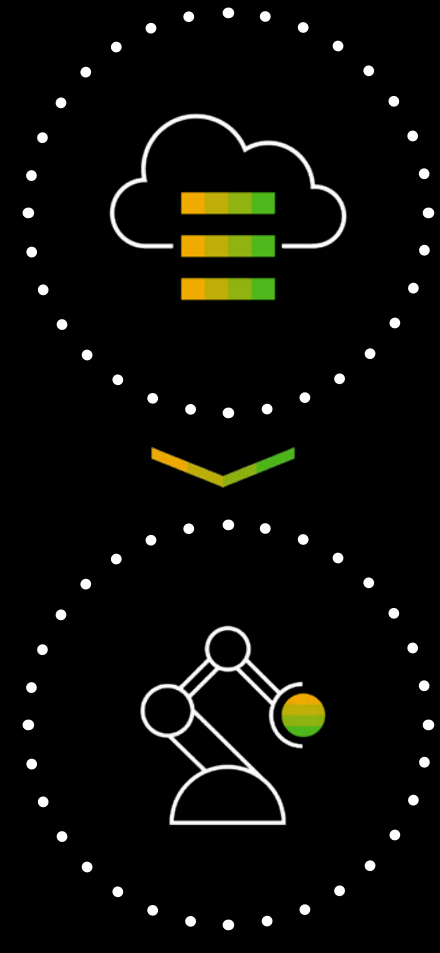

CHALLENGES

SOLUTION

Connect your brownfield to the SAP ecosystem to take full advantage of the SAP Digital Manufacturing Cloud solution.

- Acquires signals from machines of all ages, types, and makes – even those that are not network-compatible
- Collects all machine data in real time
- Provides all the tools you need to understand, translate, standardize, and communicate machine signals to higher level systems
- Enhances data quality to identify optimization potential
- Uses standardized connectivity tools and enables to simply configure your own machine templates to quickly connect the same machines types out of a Machine Repository

BENEFITS

Start using your brownfield today while preparing it for the future:

- Safeguard your machine investments while enabling innovation
- Turn your machine park into a valuable data asset
- Make better decisions based on accurate real-time data
- Increase efficiency and productivity through seamless technology integration
- Connect shop floor and top floor for better visibility and control

EVIDENCE

Control costs and increase productivity*:

<2hours

average time to connect a machine – even faster with your individual Machine Repository

up to 30

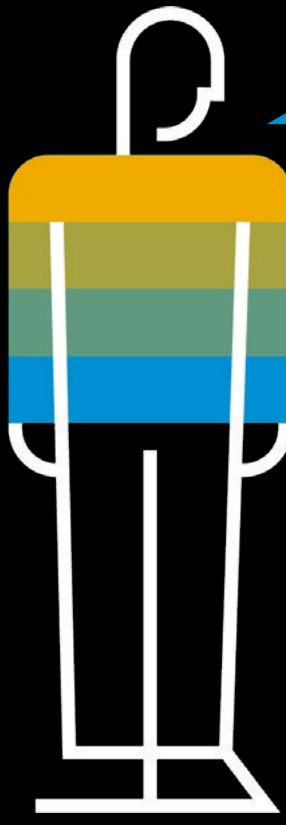

signals out of every machine on average

12%

higher productivity on average across different areas

<12

month return on investment

“The connectivity solution of FORCAM enables us to quickly collect energy data in production and use it to create the corresponding evaluations for continuous energy monitoring. We can call up this data in the system in real time at any time. Thus we have our energy costs under control in the long term.”

Martin Strehl, Lean Management Coordinator, BORGWARNER Cooling Systems, Germany
