

## Inventory4SF – The New App For Efficient Material Management on The Shop Floor

- With Inventory4SF, factory teams can manage material stocks in real time
- The app is easy to integrate and convenient to use
- It is a new generation of apps for flexible IT architectures.

**Boeblingen (Germany), February 2026.** FORCAM ENISCO is expanding its range of easy-to-integrate manufacturing apps: The Inventory4SF solution allows factory teams to efficiently manage materials in production. Material stocks can be monitored in real time, and bottlenecks can be identified and avoided early on.

Inventory4SF provides real-time transparency of material stocks and storage locations in production, thus supporting efficient material management. All factory teams work together smoothly on a uniform database, including those involved in production, logistics, and shift management.

The added value of Inventory4SF:

- Real-time overview of all material stocks and storage locations in production
- Early identification of bottlenecks or excess stocks
- All departments work on a single database for material stocks

### The new generation of shop floor apps from FORCAM ENISCO

The new generation of shop floor apps from FORCAM ENISCO makes manufacturing processes more flexible, resilient, and profitable. These solutions are easy to integrate and convenient to use, offering quickly measurable added value. These microservices can be independently integrated into existing IT landscapes as modules. In addition to Inventory4SF, which is already on the market, there is:

- **Solve4SF:** The "Solve for Shop Floor" app minimizes production interruptions. Factory teams can solve problems quickly and directly together, in the spirit of a continuous improvement process (CIP). [More](#)
- **Quality4SF:** With the "Quality for Shop Floor" app, workers can perform quality checks directly in production. All data is documented and can be evaluated centrally by quality management. [More](#)
- **The established AC4DC solution:** The "Asset Connectivity for Data Collection" solution enables the smooth networking of existing and new machines via templates, as well as global scaling. [More](#)

**About [FORCAM ENISCO](#)**

The FORCAM ENISCO GmbH group of companies supports medium-sized companies and corporations in securing their long-term competitiveness through smart manufacturing. The modular MES (Manufacturing Execution System) solutions of FORCAM ENISCO and the consulting services as an SAP Silver Partner cover all stages of digital transformation in discrete manufacturing – from entry into data-driven production and automated control of complete production and logistics processes to cross-plant and cross-country rollouts. FORCAM ENISCO has offices in Böblingen, Heidelberg, and Ravensburg. International branches are located in France, the USA, China, and India.
