

New AI Agent “ENI.one” from FORCAM ENISCO and 4IoT

- Smarter production control: AI agent designed specifically for SAP Digital Manufacturing
- Save the date: Webinar on July 7, 2026 – [Register here](#) (German spoken)

Böblingen (Germany), July 2026. How can an AI agent for SAP Digital Manufacturing be implemented effectively in practice? This question will be addressed in a webinar hosted by FORCAM ENISCO and 4IoT in July, where the new AI agent “ENI.one” will be introduced.

On July 7 at 2:00 PM (CEST), the session will focus on the ENI.one AI agent for production control with SAP Digital Manufacturing. Experts from FORCAM ENISCO and partner company [4IoT](#) will share insights on how AI in manufacturing can be launched in concrete terms using voice control with the ENI.one agent.

The “ENI.one” AI agent operates directly at the SAP DM terminal—quickly and easily. Participants will learn how shop floor operators can start and stop orders and report quantities via voice command—without a single click.
