Böblingen/Balingen (Germany), July 2026. How can maximum product variety and heterogeneous manufacturing environments be managed efficiently in a digital way? This question will be addressed by expert teams from FORCAM ENISCO and the globally active mechanical engineering company BIZERBA in a joint webinar titled: “Greater Efficiency and Data Transparency Through Intelligent MES Integration.”

On July 9, 2026, from 2:00 PM to 3:00 PM (CEST), the expert teams will demonstrate how BIZERBA successfully manages product diversity across plants using the MES FLEX solution while providing AI-ready data for AI use cases.

Using real-world examples and a live demo at a shop floor terminal, the teams will explain how MES FLEX integrates different IT systems and simplifies shop floor processes.

Webinar topics:

- Digital networking of machines and manual workstations on a single MES platform
- Standardized integration of different systems—from custom manufacturing to mass production
- All relevant information available at the terminal at the click of a button, including configurations and assembly drawings

The webinar is aimed at professionals in production, digitalization, and industrial software within manufacturing companies.

Please note:

The webinar will be conducted in German. Recordings in English will be available – please write to: customerrelations@forcam-enisco.net

About [BIZERBA](#)

BIZERBA offers customers in craft, retail, industry, and logistics a globally unique solution portfolio centered around the key variable “weight.” The offering includes end-to-end solutions for slicing, weighing, labeling, and inspection—from hardware and software to apps and cloud services, as well as labels, consumables, comprehensive services, and flexible leasing options.

Since 1866, the family-owned company headquartered in Balingen and now in its fifth generation has played a key role in shaping technological development. As an innovation leader, BIZERBA consistently drives the digitalization, automation, and connectivity of its solutions, creating reliable and sustainable systems that help customers worldwide make their processes more efficient and future-proof.

With around 4,500 employees, BIZERBA operates in over 120 countries and maintains production facilities in Germany, Austria, France, Italy, Spain, Serbia, the United Kingdom, China, the United States, and Canada, as well as a global network of sales and service locations.

About [FORCAM ENISCO](#)

The FORCAM ENISCO GmbH group helps medium-sized companies and large corporations secure their long-term competitiveness through Smart Manufacturing. Its modular factory software solutions – MES and microservices – as well as the consulting services for SAP Digital Manufacturing cover all stages of digital transformation in discrete manufacturing. This ranges from entering data-driven production to the automated control of complete production and logistics processes, all the way to rollouts across different plants and countries. The corporate group employs around 150 people at its locations in Böblingen, Heidelberg, and Ravensburg, as well as in subsidiaries in France, the USA, China, and India.
